

Android test task

Please use the stable android studio version: <https://developer.android.com/studio>

Create a simple android app that will be supported by 5+ android and portrait mode only.

The design you can find here: <https://www.figma.com/file/2j37g3uPt0577LChd5kvTA/test?node-id=5%3A21>

The application will have 3 different buttons:

1) “+” this button will create a new fragment with max page the number +1

For example, clicking on “+” on page 1 will create a page with the number 2. clicking again will create a page with the number 3 and so on.

2) “Create new notification” - clicking on this button will create a notification with the text “notification and the number of pages”.

For example, if you click it on a page with number 10 it will create a notification with the text “Notification 10”.

3) “-” delete button will delete the last fragment and all notifications which were created from that fragment.

User will be able to navigate between all fragments. (create ViewPager with possibility swipe right/left)

If you are applying for a Junior position or higher :

Clicking on a notification will open a fragment with the same page number where that notification was created.

For example, clicking on “notification7” will open a fragment with the number 7 and you will be able to swipe between those 7 fragments.

It will be plus when you in reopening of the app will be saved created fragments.

Wish you good luck!
